

GRACIOUS JOSEPH BEN

✉ graciousben.dev@gmail.com | 🌐 itsgracious | 🌐 gracious-ben
📍 Kochi, Kerala, India

ABOUT ME

Artificial Intelligence undergraduate with hands-on experience in developing AI, IoT, and software engineering projects. Skilled in designing intelligent systems, database-driven applications, and mobile solutions using technologies such as Python, Java, Flutter, PHP, and MySQL. Demonstrated ability to transform ideas into functional products through academic and personal projects. Eager to apply technical expertise, problem-solving abilities, and a growth-oriented mindset to contribute effectively in software development, AI, and technology-driven roles.

EDUCATION

Muthoot Institute of Technology and Science (MITS)

B.Tech in Computer Science and Artificial Intelligence

Aug. 2023 – May 2027

Kochi, Kerala

Nirmala Public School (CBSE)

Higher Secondary (Class XII) – 90.6%

Graduated May 2023

Kochi, Kerala

EXPERIENCE

MITS

Android App Development Intern

June 2025

Kochi, Kerala

- Gained hands-on experience in Flutter development from beginner to intermediate concepts.
- Built multiple UI-driven mobile application modules using Flutter and Dart.
- Worked on responsive design, navigation, and basic state management.

PROJECTS

Project Cypher – Vehicle Detection & Search System | Python, YOLOv8, OpenCV, Tkinter

2025

- Computer vision system to detect, track, and catalog vehicles from CCTV footage using YOLOv8.
- Extracts vehicle attributes including color, size, and license plate text via OCR; stores detection metadata in JSON for historical search.
- Built a Tkinter-based search UI with filters for vehicle type, color, and plate number, featuring clip playback and route-map visualization.

NotesCleanser – AI-Powered Note Cleanup App | Flutter, Dart, TensorFlow Lite, Google Teachable Machine

2026

- Developed a privacy-first mobile application that identifies handwritten notes, document screenshots, whiteboards, and PDFs using an on-device TensorFlow Lite image classification model.
- Implemented local gallery and PDF scanning with confidence-based filtering, enabling users to review and permanently remove note-related files while ensuring offline operation and zero cloud processing.
- Built features including selective folder scanning, pause/resume scanning, storage reclamation analytics, and Android foreground service notifications to enhance usability and performance.

LaunchPad AI – AI-Powered Project Recommendation & Blueprint Generator | Python, Gemini API, Pydantic

2026

- Built an intelligent project discovery platform that recommends industry-relevant projects using a lightweight Retrieval-Augmented Generation (RAG) architecture.
- Designed a modular multi-agent system for profile analysis, research retrieval, project blueprint generation, and long-form academic report creation.
- Generated structured project outputs including problem statements, architecture diagrams, implementation timelines, technology stacks, and resume-ready project documentation.

SONAR-Integrity, AI Powered Threat Detection System | *ESP32-S3, TensorFlow Lite Micro, IoT*

2026

- Developed an edge-AI security system that monitors high-value assets using acoustic fingerprinting and environmental sensing without cameras or continuous internet connectivity.
- Trained and deployed a lightweight CNN on ESP32-S3 for real-time threat classification and anomaly detection.
- Integrated LTE alerts, gas monitoring, servo locking, and visual status indicators for autonomous security response.

Sentinel – Network Intrusion Detection System | *Python, Scikit-learn, Flask, Raspberry Pi*

2024 – 2025

- Built an edge-deployed NIDS on Raspberry Pi 3B using a two-stage ML pipeline: Isolation Forest for anomaly detection and Random Forest for attack classification, trained on CICIDS2017.
- Applied SelectKBest (Mutual Information) and Random Forest importance scores for feature selection; developed a Flask dashboard for real-time traffic monitoring over SSH.

SKILLS

Languages: Python, Java, PHP, C,C++, SQL, JavaScript

Frameworks / Libraries: Flutter, React, MySQL, CustomTkinter, PIL, OpenCV, scikit-learn,ROS-2

Tools: Git, GitHub, VS Code, Arduino, Raspberry Pi

Concepts: Artificial Intelligence, Machine Learning, Computer Vision, Network Security, Mobile App Development, Full Stack Development

CERTIFICATIONS

NPTEL – AI: Constraint Satisfaction

2026

NPTEL – Python for Data Science

2026

NPTEL – Introduction to Machine Learning

2026

Zero Pixels – End-to-End Project Lifecycle Using MERN Stack

2025

Cambridge Linguaskill – English Proficiency Certification (B2+)

2024

ACTIVITIES & INTERESTS

Polaris Game Club – Event Management Lead

Languages: English, Malayalam

Interests: Artificial Intelligence, Mobile App Development, Cybersecurity, Database Systems,
